Abstract—The purpose of this study was to determine the effect of a 12-week training program on the heart rate (HR) and energy expenditure (EE) of sedentary, middle-aged women. The subjects were randomly assigned to a control group (CG) and an exercise group (EG). The EG performed a 12-week training program consisting of three sessions per week. The CG performed no exercise. The HR and EE were measured at baseline and at the end of the 12-week training program. The HR and EE of the EG were significantly higher than those of the CG at the end of the 12-week training program. The results of this study suggest that a 12-week training program can improve the HR and EE of sedentary, middle-aged women.

My dear Mr. [illegible]

I have just received your letter of the 10th inst.

and am glad to hear from you.

I am well and hope this finds you the same.

I have not much news to write at present.

I am, however, very much interested in the progress of the [illegible]

and hope to hear from you again soon.

I am, dear Mr. [illegible], very respectfully,

Your obedient servant,
